This query is to find the Person_Email from the PERSON table and the Product_Price from the PRODUCT table. It retrieves all possible combinations of people and product prices, including both staff and customers, along with all available cinema products.

The query joins the PERSON and PRODUCT tables using a CROSS JOIN, which means it creates a Cartesian product — combining every person with every product price. There are no filters applied, so it displays all rows, showing every potential scenario where a person might view or be associated with a product, useful for system testing, training simulations, or marketing email combinations.

This query is to find the Staff_JobTitle from the STAFF table and the Total_Assets_Used recorded for each job title. It retrieves the number of assets accessed by full-time employees who are associated with active suppliers. The data is joined from the STAFF, ASSET_LOG, STORAGE, and STOCK_SUPPLIER tables through intermediate relationships.

The query applies two filters: it only includes staff members whose Staff_EmploymentStatus is 'Full-Time', and it includes only those suppliers whose Supplier_Status is 'Active'. The records are grouped by job title and display how many assets have been used per role.

The result returns a summary of job roles and how many assets each role has logged. Only those roles with at least one asset used are shown.

This query is to find the Staff_ID and Staff_JobTitle of full-time staff, along with their related Attendance, Payslip, Shift, Cinema, and Hall information. It retrieves two attributes from each of the following six tables: STAFF, ATTENDANCE, PAYSLIP, SHIFT, CINEMA, and HALL.

The query joins these six core tables through their relevant junction tables such as STAFF_ATTENDANCE, STAFF_PAYSLIP, and STAFF_SHIFT, ensuring accurate relationship tracking based on IDs and codes. It also ensures the cinema and hall details are accurately matched through compound keys involving Cinema_ID, Cinema_Email, and Cinema_RefNum.

Three specific data constraints are applied using the AND boolean operator:

Only full-time staff are included (Staff_EmploymentStatus = 'Full-Time')

Attendance must be marked as 'Present' (Attendance_Status = 'Present')

The cinema must have a population rating of 4 or higher (Cinema_PopulationRating >= 4)

This query is to find the first name of a person, the type of seat, the lowest product price, the payment method, the order status, the movie name, the review rating, and the cinema name. It retrieves information by joining eight (8) different tables, providing a full view of the customer experience — from seating to orders, payments, and feedback.

The query joins these eight tables:

PERSON (customer details)

SEAT (cinema seat types)

PRODUCT (to get the lowest price available via a subquery)

PAYMENT (to fetch the latest payment using credit card)

C_ORDER (status of the customer's order)

REVIEW (highest rating per cinema)

CINEMA (name and ID)

MOVIE (movie being shown)

The following four selection constraints are applied using the AND boolean:

The seat must be available (Seat_AvailabilityStatus = 'Available')

The order must be completed (Order_Status = 'Completed')

The review rating must be exactly 5 (Rating = 5)

The movie must be the one with **Movie_ID = 'MOV005'`

The query is designed to output only rows that meet all four strict conditions, and it orders the results in descending order by rating, showing the highest satisfaction experiences first

This query is to find and display all payment records involving equipment suppliers by showing the Payment_ID, Supplier_ID, and Order_ID — the primary keys of the three joined tables: PAYMENT, STOCK_SUPPLIER, and C_ORDER.

The view vw_payment_supplier_order is created to simplify frequent access to this joined data. It retrieves details such as:

The method, date, and total amount of the payment

The supplier's name and type

The status and type of the order

The query includes one selection constraint where the Supplier_Type must be 'Equipment'`. This filters the data to focus only on suppliers who deliver hardware, technology, or equipment goods.
